- Digestate Management

Terix-Envirogaz offers operators operation and maintenance training for a safe and efficient production.

- Training documentation
- Theoretical training provided by professionals
- On-site operational training period
- Contextual setup on client site

After-sales Services

Our team of engineers and technicians is supported by our parts-and-service network comprised of six offices in North America.

Terix-Envirogaz also offers a remote follow-up system that provides you with real-time second-tier support. Through a secure VPN, installed systems can remotely access control system maintenance and programming as well as field instrument verification through the plant's smart network.
